

February 5, 2009

Dear RiceTec Customer:

We now have a small amount of CF Hybrid Rice Levee Blend available for planting in 2009. This product is a blend of CLEARFIELD® XL 729 and CLEARFIELD® XP746, with germination and hybridity labeled at 75%. This product is intended to be planted on levees of your RiceTec CLEARFIELD® Hybrid fields at the recommended seeding rate of 600K seed (roughly 30 pounds) per acre. The CF Hybrid Rice Levee Blend will only be available in Mini-Bulk packaging due to time constraints on packaging and shipping, and as with all Mini-Bulk packaged products it is NON RETURNABLE.

The CF Hybrid Rice Levee Blend is treated with all of RiceTec's standard seed treatments. The cost of this product will be \$86 per acre (\$90 with BASF's Tech Fee included) or \$5160 per MB (\$5400 including BASF's Tech Fee). As with our other Hybrid products, one MB is the equivalent of 40 paper units.

Please call your local RiceTec representative (Delaplaine Seed Co.) with questions or available quantities of CF Hybrid Rice Levee Blend. As stated before, this product is in short supply and seed is available as long as quantities last.

Thank you for your continued support, *RiceTec Sales and Service*

CLEARFIELD® is a registered trademark of BASF.
